THEMAL MINING NEWS.

A Placer Claim Near Philipsburg for Which \$100,000 Has Been Refused.

Mining Notes From Jefferson and Meagher Counties--The Castle Smelter

Extraordinary Power of a Water Wheel--The Vast Amount of Machinery it Moves.

In a southeasterly direction from the Eggers property in the First Chance district, says the Philipsburg Mail, lays the Homestake tunnel, where \$3,000 in gold was taken from a twenty pound candle box full taken from a twenty pound candle box full of the ore. It is not likely that much more of such very rich rock is to be found, but it shows what has already been done and what the future may bring. There is a 300-foot tunnel on the Homestake, and it is said that work is soon to be commenced on the commenced on th said that work is soon to be commenced on it again. An offer of \$100,000 for this prop-

erty has been refused. The only placer property around Pioneer that is now being worked is that owned by Con Kohrs and Ed. Moore, who use all the water that is in Rock Creek lake with their giant hydraulic, and they will not be able to work more than a week or two longer, as the water supply is decreasing every day. Their property, however, is very rich. Two weeks ago they cleaned up \$1.900 in gold, to work more than a week or two longer, as the water supply is decreasing every day. Their property, however, is very rich. Two weeks ago they cleaned up \$1,900 in gold, and they expect to clean up at least \$3,000

Messrs. Tibbetts, Norris and others are drifting on the Walker bar, a good ground, paying about \$7 a day for each man em-ployed.

management work was suspended. For a number of years it lay idle, and, indeed, the fact that there was such a mine in Jefferson county had passed from the memory of many of the old settlers, while the tender-fect were as ignorant of its existence as the nations of Central Africa. For some time past George Kennedy, the well-known min-

past George Kennedy, the well-known mining man has been operating it with success, and a few days ago made a rich strike therein. The new strike contains a large body of ore of the same character that created such a furore in 1875-6. Mr. Kennedy has manifested his faith by his works, and we congratulate him upon his good fortune.

The Mollie McGregor mine, situate near Boulder, his been producing sixty tons of good shipping ore per week for some months past. A shut down has been ordered, but for what reason is not definitely known, except to the owners of the mine. There is a rumor that the plan of working that has heretofore been carried out was not satisfactory fo all concerned. The mine has constantly improved both in quality and quantity of its product. It is reported that the returns from the ore shipped was satisfactory. It is to be regretted that this valuable property is to lie idle for an indefinite period.

Mr. J. C. Sloss, who has been for some years developing the Von Arnum mine, located was founded.

rumor that the plan of working that has heretofore been carried out was not satisfactory fo all concerned. The mine has constantly improved both in quality and quantities of filth have been tity of its product. It is reported that the returns from the ore shipped was satisfactory. It is to be regretted that this valuable property is to lie iddle for an indefinite period.

Mr. J. C. Sloss, who has been for some years developing the Von Arnum mine, located near Amazon, has found a good ledge of first-class ore and this week ships two carloads by the Montana Central road to the Great Falls smelter. Mr. Sloss, who has managed the Cable mill for a number of years and has had experience in mining for the past twenty years, is of the option that the Von Arnum is a good mine. It has been badly broken up, but now seems to be its typhoid fever, said we try that the control of the sawer trenches has a good deal to do with it. Helena, or a large portion of filth from under the nate of filth have been buried.

Dr. Atkinson believes it is to the extreme dryness of the past season, coupled with the malarial influences caused by the upheavel of filth from the sewer trenches. He does the deal to do with it. Helena, or a large portion of filth from under the pound in the stands on filled ground under which great quantities of filth have been buried.

Dr. Atkinson believes it to the extreme dryness of the past season, coupled with the malarial influences caused by the upheavel of filth have been suited.

Dr. Barbour attributes it to the extreme dryness of the past season, coupled with the malarial influences caused by the upheavel of filth from the sewer trenches. He does saik and that is all they think about it. It is not great quantities of filth have been buried.

Dr. Atkinson believes it to the extreme dryness of the past season, coupled with the malarial influences caused by the upheavel of filth from the sewer trenches. He does the dryness of the past very was made of beaver and was very extended by the under the drynes of been badly broken up, but now seems to be solid. We trust that the ore will prove to be such as to justify continued working and upon a large scale,

Meagher County.

Husbandman: The Castle smelter, which closed down last week, has chronicled on of the most successful runs ever made by any smelter of its capacity in the same time in Montana. In fifty-eight days it turned out 16,922 bars of bullion, weighing 1 640 200 pounds from ore from the Cumberland The net value of this output mine. The net value of this output is placed all the way from \$35,000 to \$50,000, the exact figures not being made public. The closing down, we understand, was caused by the smelter owners not being willing to continue their lease at the original figure, but wanted a raise of \$10 per day. This the Cumberland company declined, and will instead of stopping carry on extensive development work during the winter with a view to the erection of a large smelting plant at the mine in early spring. There are three companies at work in

There are three companies at work in Neihart. The Hudson Mining company is pushing the 2,500 foot tunnel on the eighty-eight, and the syndicate composed mostly of Granite Mountain men, are at work on the Moulton, while a third party has taken a bond upon some Carpenter creek property and are vigorously prosecuting development.

Ontario Mine.

tario mine, Utah, exceeds 30 miles in lineal measure. The ore runs from \$40 to \$100 per ton. About 30 per cent is saved The total amount of cuttings in the Onper ton. About 90 per cent is saved in the mills. The total cost of operating is about \$30. The mine has produced over \$23,000,000 in silver bullion and is still in good condition, promising many years of successful on pat.

Extraordinary Power Equipment,

The Pelton W t r Wheel company, of San Francisco, have recently furnished the Treadwell mill, of Alaska, a power equipment, presenting many very interesting

The mill referred to is the largest quartz mill in the world, consisting of 240 stamps, mill in the world, consisting of 240 stamps, 96 concentrators, 12 ore crushers, etc., requiring about 500 horse power. All of this machinery, covering several acres of land, with its vast complication of counter-shafts and connections, is now run by a single Pelton wheel, 7 feet in diameter, operating under a head of 490 feet, making 285 revolutions and using 680 cubic feet of water per minute, which is discharged through a nozzle three and thirty-one hundredths inches in diameter. With a four-inch nozzle this wheel will work up to 735 horse power.

power.

Pefect regulation is afforded by the use of a deflecting nozzle operated by a hydraulic governor. This is a nozzle about four feet long, with a ball joint at the butt end. To the discharge end is attached by lever connections an automatic hydraulic regulator, which varies the amount of water applied to the wheel as may be needed to adapt it to carrying loads. This device has been generally adopted by the Pelton company, as affording the most simple, sensitive and satisfactory regulation, both for general machinery and electrical light purposes.

for general machinery and electrical light purposes.

Included in the above equipment was an eight-foot Pelton wheel to drive a fifteen drill compressor, requiring 175 horse power. Also two small eighteen-inch wheels to run dynamos which light the entire works. Probably no such amount of power was ever before furnished at so small expense, both as to first cost and that of maintenance. This mammoth mill affords a fair illustration of the modern methods of mining and of how low grade ores can be made to pay large dividends.

Fur trade is booming at Babcock's fur room.

LOOKING UP THE CAUSES.

Talks With Physicians About the Preva lent Sickness in Helena.

A species of typhoid fever is quite prevalent in Helena, the physicians having over eighty cases in hand. Typhoid in this country is generally known as mountain fever. Some physicians endeavor to find a distinction in these diseases, but this they have been unable to do as all the symptoms are typhoid in character. Physicians say there is no such thing as mountain fever. That this disease is infectious and not contagious, should be born in mind. No alarm need be apprehended from its prevalence, but it has been thought advisable to secure some opinions as to the cause of the fever, that those not already affected may, if pos-

sible, provide against it.

Local physicians say this typhoid is a common thing in dry weather, and the exceptionally dry character of the past season has been such that the fever exists to a greater extent than has been known before.

Typhoid is not confined to particular com-Typhoid is not confined to particular com-munities. It exists in different forms in every part of the country and originates from different causes.

privies, and especially the contamination of drinking water, and when springs or wells receive by percolation the surface water from outbuildings.

usually high and dangerous temperature of the body.

Some of our local doctors agree that the typhoid now in Helena is due to the contamination of our drinking water, while others say the exhalations, consequent upon the continuous upheaval of the earth in laying water mains and sewer pipes, which has been going on constantly since snow disar-Jefferson County.

From the Boulder Sentinel: A few years ago the Little Emma mine, situated on Jackson creek, in Jefferson county, was considered among the richest in Montana. It was successfully worked for a time, but owing to lack of machinery and proper management work was suspended. For a series of the physicians who have cases instruct the nurses to boil the water, and afterwards place it in an ice chest or other cool place before using it for cooking or drinking purposes. By boiling water it destroys whatever germs of disease may exist.

Contamination of water is said to be largely due to the sluggishness of streams and where the streams are low. This is exactly the state of affairs around Helena. All the water supply comes from streams which are carefully husbanded that no drop may escape. In this connection it has been may escape. In this connection it has been ascertained that typhoid prevails in the eastern and northern portions of the city, which are supplied from the pump station near the fair grounds. The drainage of the city goes in that direction on a natural gravity plane. The vicinity surrounding

city goes in that direction on a natural gravity plane. The vicinity surrounding the pump station well is also rapidly filling up with houses, and several physicians have expressed the opinion that they would not be surprised if the typhoid didn't originate from that water.

Dr. Bullard, who is a member of the board of health, has given the typhoid fever subject some attention and he believes upheaving of the sewer trenches has a good deal to do with it. Helena, or a large portion of it stands on filled ground under which great quantities of filth have been buried.

nd fever, as it has all ti toms. He is anxious to see a case of mountain fever. He has been called to treat patients for that fever, but so far it has proved to be typhoid. He attributes the

where it exists that the water should be boiled and afterwards cooled before using." Dr. Bacon says he has several cases in Helena and a great many in Butte. He does not consider it genuine typhoid fever, but thinks it a bilious intermittent fever of 5 low type. It is not contagious but infec-tious, and where more than one member of a family has it, he attributes it to the want of precaution on the part of nurses. Where the excrement is removed at once and disinfectants used promptly, there is no danger to the well members of the family. He thinks the disease comes from germs in the air and not from the water; yet, in all his cases recommends that the water be boiled.

MAKING COSTLY ROBES.

A Helena Dealer Tells About the Way Sealskins are Prepared for Market.

Their High Price Caused by the Expense Incurred in the Early Stages.

A Chapter on the Process of Making Hats The Material that is In Them.

People have a vague idea, and many do not even stop to consider, when they purchase seal garments and fur goods, the process they have to go through before being placed on the market," said E. C. Babcock, the well-known hatter and furrier yesterday, to an INDEPENDENT reporter. "It is the height of every lady's ambition to wn a sealskin wrap, and it is ten to one that not a lady in Helena (well, I will not say all) know how their wrap is prepared. Many think that the fur as it is in the garment is just as it was stripped from the animal. Nothing could be farther from the fact. Few skins are less attractive than that of the seal at first, as the fur is completely covered and hidden by the dull gray-brown and grizzled over hair. This mask has then to be removed, and this is an operation requiring a very great amount of patience and skill, with a consequent increase in price. The unhair ing is effected by warmth and moisture ing is effected by warmth and moisture, which softens the roots of the overhair, and enables it to be pulled out, or by shaving the inner side very thin, which cuts off the roots of the hair, which penetrate deeply, and leaves untouched those of the fur, which are very superficial. Whichever method is employed the hair must be taken off uniformly or the fur will never lie smoothly, but always have a rungled look smoothly, but always have a rumpled look, which can never be corrected by any subwhich can never be corrected by any subsequent treatment. This will explain to
some extent the high price of sealskin
jackets and cloaks, and also the cause of the
different prices one hears of, as a
good many skins are more or less
spoilod in the dressing. Another cause, too,
is the quality of the dye, and the workmanship employed in its use. The liquid color
is put on with a brush and the standing
points of the far carfully covered, the skin
is then rolled up fur inside, and then, after
a little time, hung up and dried. The dry
dye is then removed and a further coat applied, dried, removed, and so on till the redye is then removed and a further coat applied, dried, removed, and so on till the requisite shade is obtained. One or two of these coats are laid on thick and pressed down to the roots of the fur, making what is called the ground. From eight to twelve coats are needed to produce a good color. No wonder a first class sealskin is expensive; it is just as true now as ever it was; but in these days of universal charmers. but in these days of universal cheapness one is apt to forget that, if you want a really

"The men know but very little about hats.

good thing you must pay a good price."
"Do you think the men know all about
the hats they wear—that is, how they are
made and what material is in them?" asked

girls pluck the hair, leaving the fur, which is not unlike beaver. There the pelt is placed in a cutting machine, which shaves the fur from it and the fur is after-wards blown through heated pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and when it comes out it is the through pipes proved to be typhoid. He attributes the cause to impurities in the water and has little faith in the idea that it originates from the ground, although this is the cause of typhoid in many densely inhabited cities of the east. His experience with typhoid has been that in nine cases out of ten contamination of drinking water is the cause.

"I recommend," he said, "in families where it availed that the water should be applied to the cause and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and a generating apparatus. The fur is blown a distance of about 100 feet through pipes and when it comes out is in strips or sheets. Then it is dyed to whatever color is wanted and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with shellac to make it stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterwards layers of this clear stock with the stiff and afterward polished until it is thoroughly shaped. It finally finds its way to the finishing rooms,

and the Derby hat is made.

Soft hats go through the same process, exsoft hats go through the same process, excepting that shellac is left out. The silk placed on silk hats is imported from Paris. The frame is all shellac. The process of making silk hats is very simple."

"What is the average size of the Helena male head?"

"Seven and one-eighth is the average. A man who wears that size has 22% inches circumference around the head. The table for telling what size hat a man wears table for telling what size hat a man wears runs this way: $6\%_4$ is $22\%_4$ inches; $6\%_4$ is $21\%_4$; $7\%_4$ is $22\%_4$; $7\%_4$ is $22\%_4$; $7\%_4$ is $22\%_4$; $7\%_4$ is $23\%_4$; $7\%_4$ is $24\%_4$; $7\%_5$ is $24\%_4$; 8 is 25 inches. The fall style of hats has been a sensible selection; a small man can now get a hat in keeping with his size, and a tall man can fare equally as well. Heretofore nearly the same shape and size had to be worn by all."

Cut With a Razor.

Boston, Oct. 26.-This afternoon John L. Sullivan and a party of followers, among whom were Tommy Kelly, ex-champion featherweight, and Tommy Shay, made the rounds of several saloons, finally bringing up in a barber shop. Shay, who was considerably under the influence of liquor, had attempted several times to engage Sullivan in conversation upon matters which he did not care to discuss and had been told to desist. While Sullivan was seated in the chair getting shaved, Shay again began his talk. Kelly then interferred whereupon Shay made an insulting remark to the former, who quickly seized a razor and inflicted a terrible wound under Shay's left ear. Sullivan in the meantime walked out of the place, entered a cab and drove away. Kelly surrendered himself to to the police. Shay's wound is considered extremely dangerous. siderably under the influence of liquor, had

Delancy Knocked Out.

San Francisco, Oct. 26.-Jimmy Murphy. of Australia, and Dick Delancy, of New York, lightweights, met at the Occidental Athletic club last night in a fight to a finish for a purse of \$650.
